

THE ARCHITECTS CHOICE

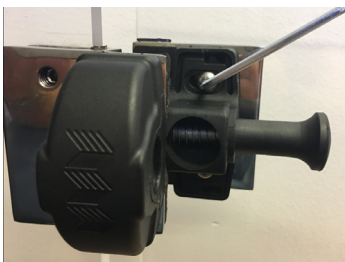

Install the Architects Choice gate latch following the "How to Install" instructions with a gate to panel/post/wall gap up to (not exceeding) 10mm as per AS1926.1.

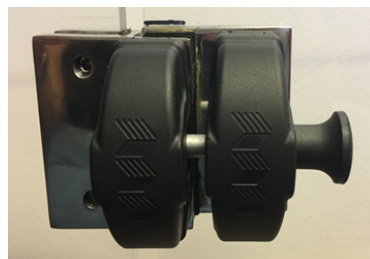

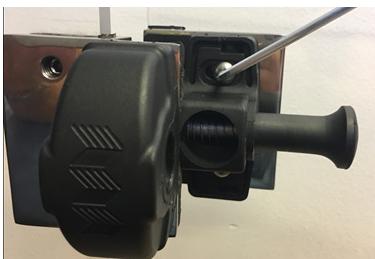

There may be instances when the latches do not align and need to be adjusted (due to the latch body catching on the receiving body).

To adjust the latch, use a thin implement remove the latch body cover.

Using a hex key, loosen the screws and adjust the latch body so the latch can close. Remember not to exceed the 10mm gate to panel/post/wall gap.

Re-tighten screws with a hex key and replace cover on the latch and test the gate closing action.

Should you have any difficulties throughout this process please contact Protector Premium
